

What your dog's breed composition means

Level 1

This category recognizes when a dog's DNA contains a majority of one specific breed (75% or greater). A dog will only report with a Level 1 breed if they have a high percentage match to a single breed in their DNA. Most mixed breed dogs will not usually have a breed in this category unless one or both of their parents are purebred.

Level 2

This category reports breeds that may be easily recognizable in your dog. Each breed listed makes up between 37%-74% of your dog's breeds. Dogs with a large mixed ancestry will not normally have breeds reporting at this level.

Level 3

This category identifies breeds that have between 20%-36% of the listed breed(s).

Level 4

This category represents 10%-20% of the breed DNA. Dogs with large mixes may have a number of breeds in this category.

Level 5

This category represents the lowest level of breed in your dog occurring at 9% or less. These breeds still appear at a low and measurable amount in your pet's DNA and were likely carried over from several generations.
